

THE FLOW OF ONE ROUND

The same cooking show as before — now drawn. Follow the arrows: every stop a dish passes through, in order, and the loop that keeps the show going.

1 · ONE ROUND, TOP TO BOTTOM — in the code: one “wave”

THE STATES — WHERE THINGS CAN BE

A “state” is just a labelled box a thing can sit in, and arrows are the only ways out. Three pictures cover the whole factory: the show, the round, the dish.

2 • THE SHOW — in the code: the run

3 • THE ROUND — in the code: a wave · always the same five stops, in order

4 • THE DISH — in the code: an iteration · every idea lives one of these two lives

WHAT CARRIES FORWARD

Rounds aren't isolated — each one hands four things to the next. And when someone fumbles, the showrunner doesn't panic: it just calls in more experience, one rung at a time.

5 · WHAT EACH ROUND HANDS TO THE NEXT

6 · THE STAND-IN LADDER — in the code: L0 → L3

That's the whole factory. Rounds of ideas flowing through the same five steps, three simple state pictures telling you where anything can be, four things carried from round to round, and one golden rule: performers never touch the paperwork. Everything else you'll meet in the code is detail.
